

```

This will not be ignored.
% This won't be ignored either.
new line2
Also, note that it doesn't matter whether I format that really weirdly.
new line!
That also creates a new line
Commands always start with backslash (\)
Some commands don't need an input like \noindent
that removes the indent at the start of a new line (like \newline).
Some other commands take some input like the commands for italicizing and
bolding the text.

```

1 Or even some other that can bring a bit of structure:

2 Some structure is needed!

We covered the followings:

1. Ignored comments with %
2. The unimportance of the text format (focus on the content!)
3. **Some** *basic* commands

Now try to play around with all that and restructure all this
